Bespoke Greenhouses and Climate Systems

bespoke structure

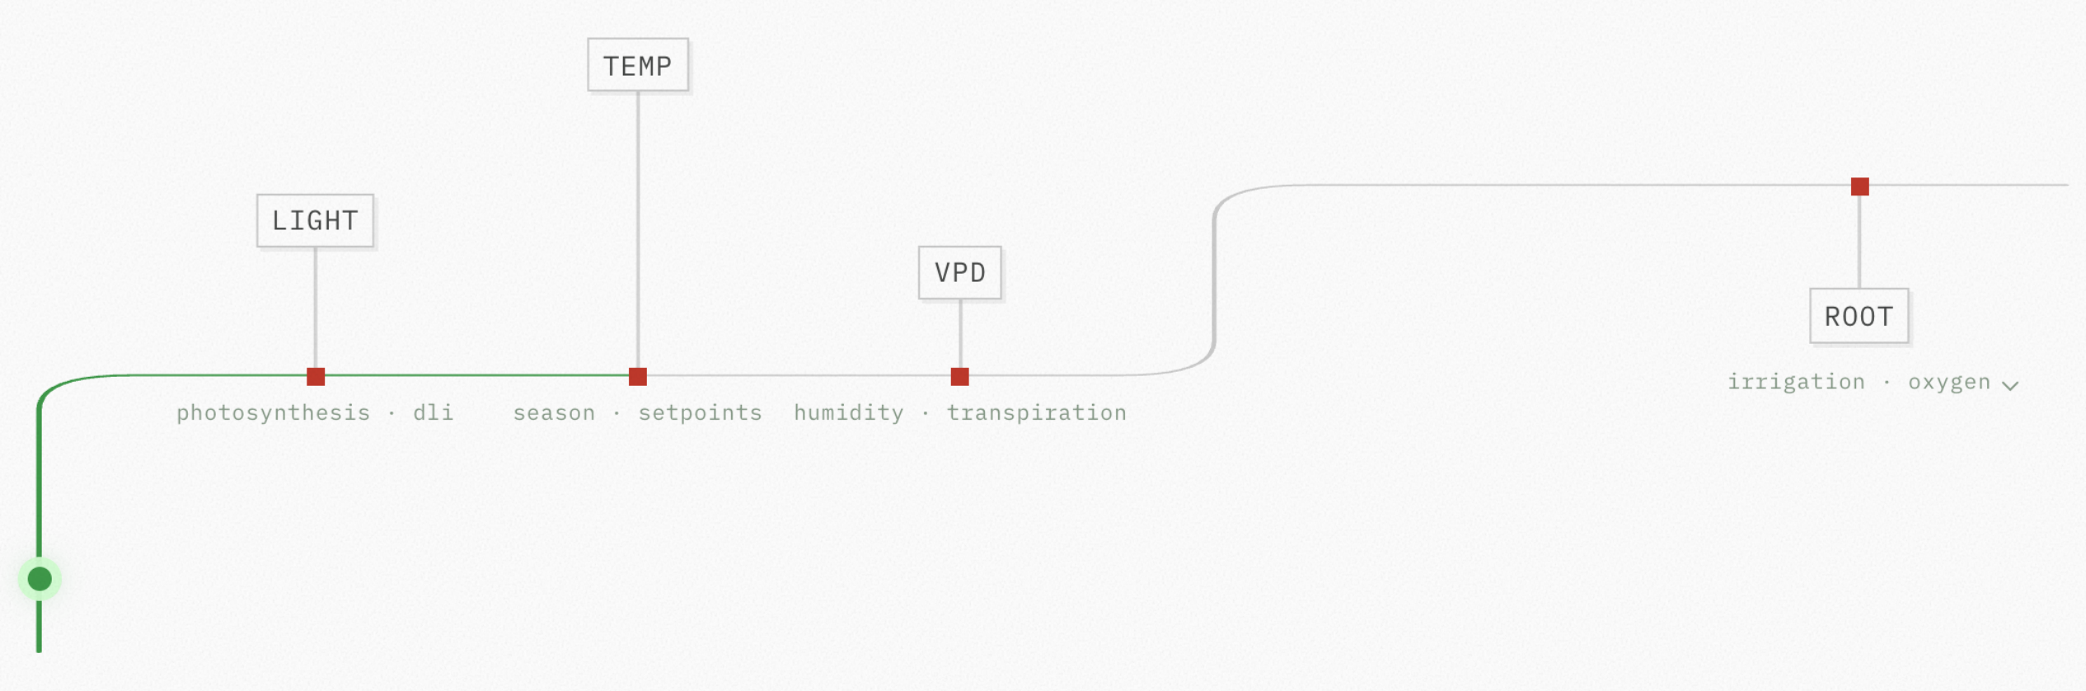
living climate

Root soil.

grow more of the year,

in a greenhouse built for your site and your crops.

Each one is planned around the light, weather, and crops on your site.



veltform

lifestyle

The same structure can be a kitchen garden, a botanical library, or a living space.

kitchen garden

Vegetable production, planned for maximum efficiency.

botanical library

A stable climate for rare collections.

living space

A comfortable mixed-use space for plants and people.

services

a complete greenhouse solution

The sum or selection of these services makeup a complete greenhouse solution

01 Site and crop viability assessment

02 Climate management design

03 Root zone and irrigation planning

04 Supplementary lighting

05 Monitoring and control

06 Training and guidance

We assess light levels across your site in summer and winter to understand what you can grow, where, and when. The assessment also helps determine whether supplementary lighting or climate control would be useful for your chosen crops.

Bespoke Greenhouses

Climate Systems

Use sensors

in your greenhouse to steer the climate.

Hands off approach to climate management

SENSORS

veltform

- temperature · air movement
- humidity · vapour pressure deficit
- moisture · irrigation schedule
- light · daily light requirement
- monitoring · remote alerts
